

Polishing Cloths Interlock White 10kg in Box (Sweatshirts & T-Shirts)

The 2650 white interlock polishing cloth combines a smooth, dimensionally stable structure with a white color that makes dirt and saturation quickly visible. This makes this cloth a practical choice for precise cleaning, quality control and high-quality finishing. The low-lint interlock structure is suitable for, among other things, paint preparation, assembly, mechanical engineering, final cleaning and technical maintenance. The cloth can be used in a controlled manner on components and surfaces where clean results and good visual inspection are important. The polishing cloths are made from carefully sorted, recycled white textile and are supplied in a 10 kg box. For use with solvents or on critical surfaces, we recommend carrying out a practical test with the cleaning agent...
